METABOLIC

4

Cagrilintide

\$45.00

5 mg / vial

A long-acting agonist of the amylin and calcitonin receptors. Studied for reducing appetite, slowing gastric emptying, and reducing visceral fat, and it works well alongside GLP-1 agonists.

Retatrutide

\$120.00

20 mg / vial

A triple agonist that acts on the GLP-1, GIP, and glucagon receptors at the same time. Studied for substantial visceral fat reduction and broad metabolic changes across several hormonal pathways.

Semaglutide

\$45.00

5 mg / vial

A GLP-1 receptor agonist that helps regulate appetite, slows gastric emptying, and steadies blood sugar. Widely studied for weight loss and for heart and metabolic health.

Tirzepatide

\$85.00

10 mg / vial

A long-acting dual agonist of the GIP and GLP-1 receptors. Studied for greater weight loss and better blood sugar control than a GLP-1 alone.

RECOVERY

2

GLOW

\$85.00

80 mg / vial

A blend of three peptides: GHK-Cu, BPC-157, and TB-500. Studied for tissue repair, skin and collagen, and recovery.

KLOW

\$100.00

80 mg / vial

A blend of four peptides: GHK-Cu, BPC-157, TB-500, and KPV. Studied for tissue repair, the body's inflammation response, and recovery.

LONGEVITY

2

MOTS-C \$40.00

10 mg / vial

A peptide encoded in mitochondrial DNA. Studied for activating AMPK, improving insulin sensitivity, helping the body adapt to metabolic stress, and its effects on age-related decline in mitochondrial function.

NAD+ \$60.00

500 mg / vial

A coenzyme cells use for energy metabolism and DNA repair. Studied for supporting the growth of new mitochondria, activating sirtuins, and easing age-related decline in how cells work.

GH AXIS

2

Ipamorelin \$25.00

5 mg / vial

OUT OF STOCK

A selective ghrelin receptor agonist that triggers pulses of growth hormone release. Studied for preserving muscle and supporting recovery, with little effect on cortisol or prolactin.

Tesamorelin \$55.00

10 mg / vial

A stabilized synthetic GHRH analog that signals the pituitary to release the body's own growth hormone. FDA approved for visceral lipodystrophy, and studied for visceral fat reduction and body composition.
